TITLE PAGE OF THE FIRST EDITION OF THE PRINCIPIA
(See Appendix, Note 2, page 622)

AXIOMS, OR LAWS OF MOTION¹

LAW I

Every body continues in its state of rest, or of uniform motion in a right line, unless it is compelled to change that state by forces impressed upon it.

PROJECTILES continue in their motions, so far as they are not retarded by the resistance of the air, or impelled downwards by the force of gravity. A top, whose parts by their cohesion are continually drawn aside from rectilinear motions, does not cease its rotation, otherwise than as it is retarded by the air. The greater bodies of the planets and comets, meeting with less resistance in freer spaces, preserve their motions both progressive and circular for a much longer time.

LAW II²

The change of motion is proportional to the motive force impressed; and is made in the direction of the right line in which that force is impressed.

If any force generates a motion, a double force will generate double the motion, a triple force triple the motion, whether that force be impressed altogether and at once, or gradually and successively. And this motion (being always directed the same way with the generating force), if the body moved before, is added to or subtracted from the former motion, according as they directly conspire with or are directly contrary to each other; or obliquely joined, when they are oblique, so as to produce a new motion compounded from the determination of both.

LAW III

To every action there is always opposed an equal reaction; or, the mutual actions of two bodies upon each other are always equal, and directed to contrary parts.

Whatever draws or presses another is as much drawn or pressed by that other. If you press a stone with your finger, the finger is also pressed by the

[¹ Appendix, Note 14.] [² Appendix, Note 15.]

[13.]

LAW I

Every body continues in its state of rest, or of uniform motion in a right line, unless it is compelled to change that state by forces impressed upon it.

LAW II²

The change of motion is proportional to the motive force impressed; and is made in the direction of the right line in which that force is impressed.

14

NEWTON'S MATHEMATICAL PRINCIPLES

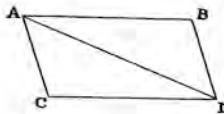

stone. If a horse draws a stone tied to a rope, the horse (if I may so say) will be equally drawn back towards the stone; for the distended rope, by the same endeavor to relax or unbend itself, will draw the horse as much towards the stone as does the stone towards the horse, and will obstruct the progress of the one as much as it advances that of the other. If a body impinge upon another, and by its force change the motion of the other, that body also (because of the equality of the mutual pressure) will undergo an equal change, in its own motion, towards the contrary part. The changes made by these actions are equal, not in the velocities but in the motions of bodies; that is to say, if the bodies are not hindered by any other impediments. For, because the motions are equally changed, the changes of the velocities made towards contrary parts are inversely proportional to the bodies. This law takes place also in attractions, as will be proved in the next Scholium.

COROLLARY I

A body, acted on by two forces simultaneously, will describe the diagonal of a parallelogram in the same time as it would describe the sides by those forces separately.

If a body in a given time, by the force M impressed apart in the place A, should with an uniform motion be carried from A to B, and by the force N impressed apart in the same place, should be carried from A to C, let the parallelogram ABCD be completed, and, by both forces acting together, it will in the same time be carried in the diagonal from A to D. For since the force N acts in the direction of the line AC, parallel to BD, this force (by the second Law) will not at all alter the velocity generated by the other

force M, by which the body is carried towards the line BD. The body therefore will arrive at the line BD in the same time, whether the force N be impressed or not; and therefore at the end of that time it will be found somewhere in the line BD. By the same argument, at the end of the same time it will be found somewhere in the line CD. Therefore it will be found in the point D, where both lines meet. But it will move in a right line from A to D, by Law I.

Towards 2020 Science

Some 400 years later, Newton, in his efforts to understand the natural laws of the rate of change in motion, used algebra to underpin another new branch of mathematics: calculus (a branch for which von Leibniz is simultaneously and independently credited). Calculus spurred scientists “to go off looking for other laws of nature that could explain natural phenomenon in terms of rates of change and found them by the bucketful - heat, sound, light, fluid dynamics, electricity and magnetism” [2].

A scientific revolution is just beginning.

However, what this report uncovers, for the first time, is a fundamentally important shift from *computers* supporting scientists to ‘do’ traditional science to computer science becoming embedded into the very fabric of science and how science is done, creating what I am prepared to go so far as to call ‘new kinds’ of science¹.

Molecular Dynamics Simulation

- Newton's equation of motion

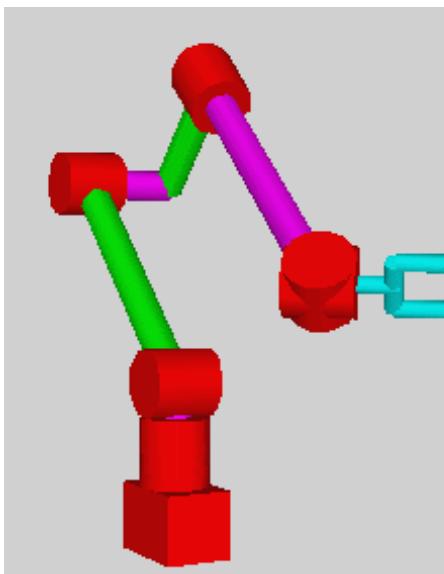

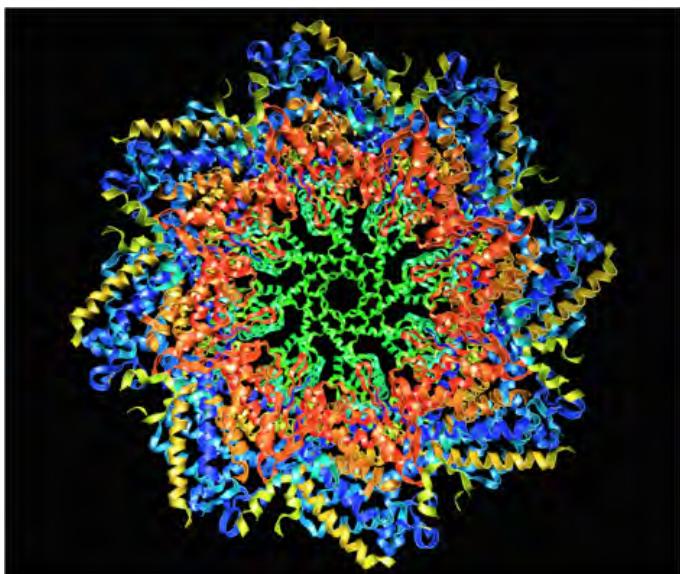

$$m_i \frac{d^2 \mathbf{r}_i}{dt^2} = -\frac{\partial V(\mathbf{r}^N)}{\partial \mathbf{r}_i} \quad (i = 1, \dots, N)$$

- Many-body interatomic potential

$$V = \sum_{i < j} u_{ij}(|\mathbf{r}_{ij}|) + \sum_{i, j < k} v_{jik}(\mathbf{r}_{ij}, \mathbf{r}_{ik})$$

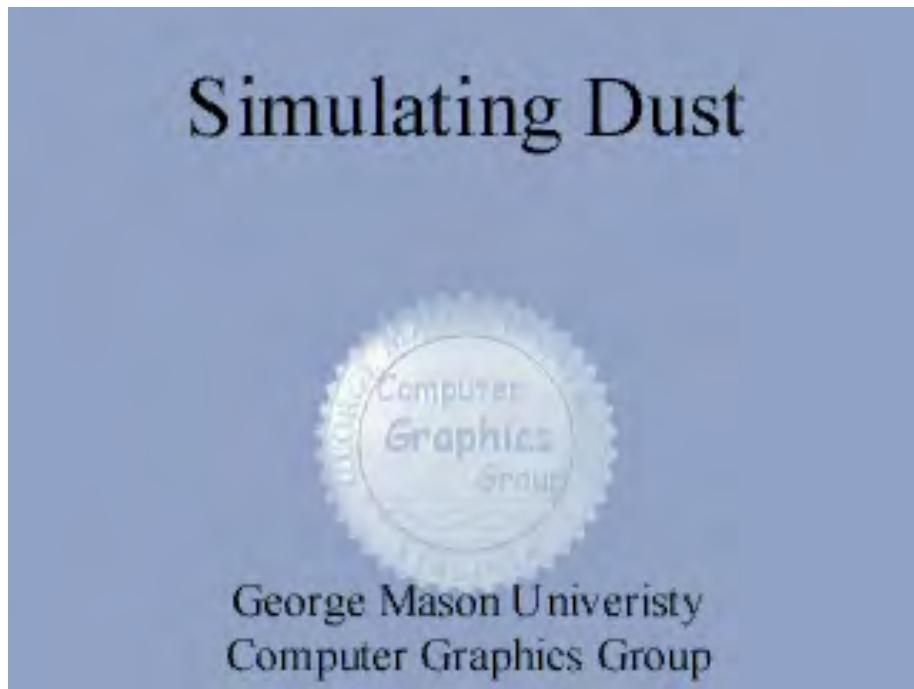

- Application: drug design, robotics, entertainment, etc.

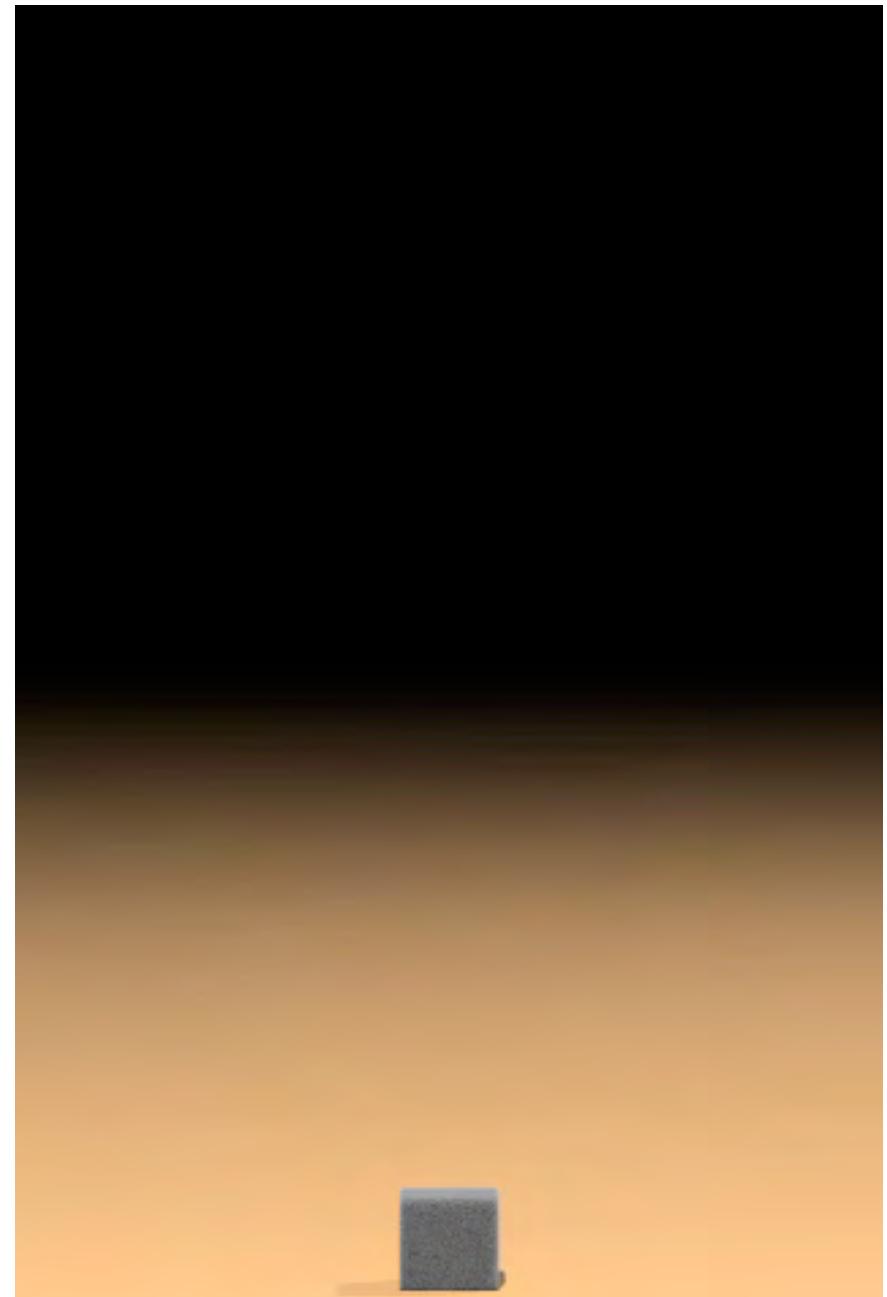

Molecular Dynamics in Graphics

Particle modeling of dust & smoke

Jim Chen (George Mason)

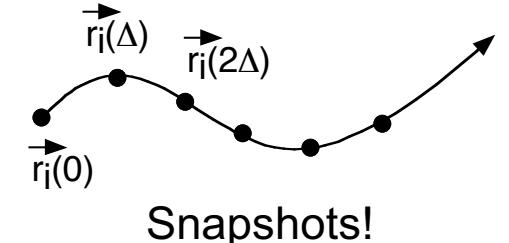

Ron Fedkiw (Stanford)

MD Algorithm

Time discretization: differential → algebraic equation

$$\begin{cases} \vec{r}_i(t + \Delta) = \vec{r}_i(t) + \vec{v}_i(t)\Delta + \frac{1}{2}\vec{a}_i(t)\Delta^2 \\ \vec{v}_i(t + \Delta) = \vec{v}_i(t) + \frac{\vec{a}_i(t) + \vec{a}_i(t + \Delta)}{2}\Delta \end{cases} \quad \vec{a}_i = -\frac{1}{m}\frac{\partial V}{\partial \vec{r}_i}$$

Time stepping: Velocity Verlet algorithm

Given $(\vec{r}_i(t), \vec{v}_i(t))$

1. Compute $\vec{a}_i(t)$ as a function of $\{\vec{r}_i(t)\}$
2. $\vec{v}_i\left(t + \frac{\Delta}{2}\right) \leftarrow \vec{v}_i(t) + \frac{\Delta}{2}\vec{a}_i(t)$
3. $\vec{r}_i(t + \Delta) \leftarrow \vec{r}_i(t) + \vec{v}_i\left(t + \frac{\Delta}{2}\right)\Delta$
4. Compute $\vec{a}_i(t + \Delta)$ as a function of $\{\vec{r}_i(t + \Delta)\}$
5. $\vec{v}_i(t + \Delta) \leftarrow \vec{v}_i\left(t + \frac{\Delta}{2}\right) + \frac{\Delta}{2}\vec{a}_i(t + \Delta)$

Divide-Conquer-(Re)combine

- “The first was to never accept anything as true which I could not accept as obviously true. The second was to divide each of the problems in as many parts as I should to solve them. The third, beginning with the simplest and easiest to understand matters, little by little, to the most complex knowledge. And the last resolution was to make my enumerations so complete and my reviews so general that I could be assured that I had not omitted anything.” (René Descartes, *Discourse on Method*, 1637)

divide (conquer) recombine

New Cancer Research Center to be Based at USC

By James Grant on October 26, 2009 7:55 AM

USC has been selected to establish a \$16 million cancer research center as part of a new strategy against the disease by the U.S. National Institutes of Health and its National Cancer Institute.

The five-year award will create a National Cancer Institute Physical Science-Oncology Center based at USC and involving a consortium of universities. Partnering in the USC grant will be Arizona State University, the California Institute of Technology, Cold Spring Harbor Laboratory, New York University, Stanford University, the University of Arizona and the University of Texas at Austin.

The Physical Science-Oncology Center initiative differs from past cancer research programs. While cancer biologists often work with scientists in other fields, this marks the first large-scale recruitment of outside scientists in the battle against the disease.

USC Viterbi School of Engineering professor and principal investigator W. Daniel Hillis

Enabling Computer Science Technologies

What can computer science do to enable extreme-scale computational science?

A lot! That's what you will learn in CSCI 596:

- **Parallel computing**
- **Visualization**
- **Grid/cloud computing**

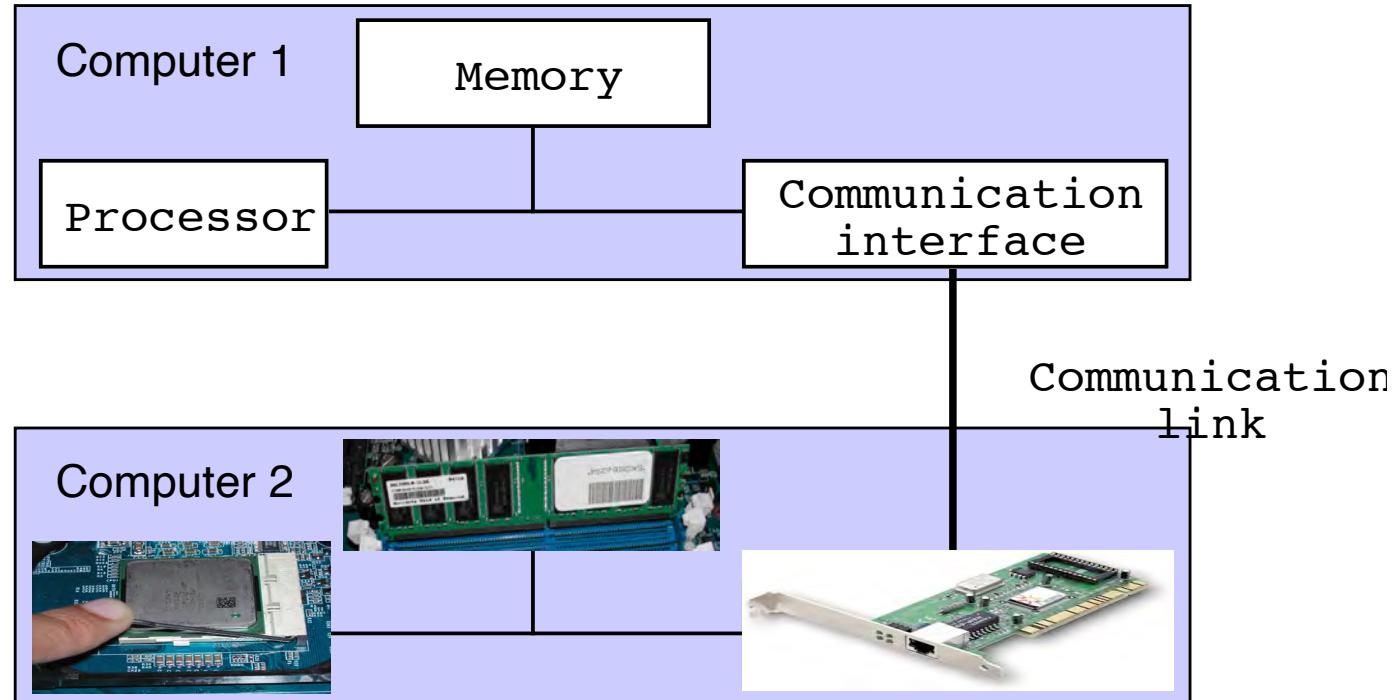

Parallel Computing

Parallel MD algorithm: Easy!

1. $\vec{v}_i(t + \frac{\Delta}{2}) \leftarrow \vec{v}_i(t) + \frac{\Delta}{2} \vec{a}_i(t)$
2. $\vec{r}_i(t + \Delta) \leftarrow \vec{r}_i(t) + \vec{v}_i(t + \frac{\Delta}{2})\Delta$
3. atom_migrate()
4. atom_cache()
5. Compute $\vec{a}_i(t + \Delta)$ as a function of $\{\vec{r}_i(t + \Delta)\}$
6. $\vec{v}_i(t + \Delta) \leftarrow \vec{v}_i(t + \frac{\Delta}{2}) + \frac{\Delta}{2} \vec{a}_i(t + \Delta)$

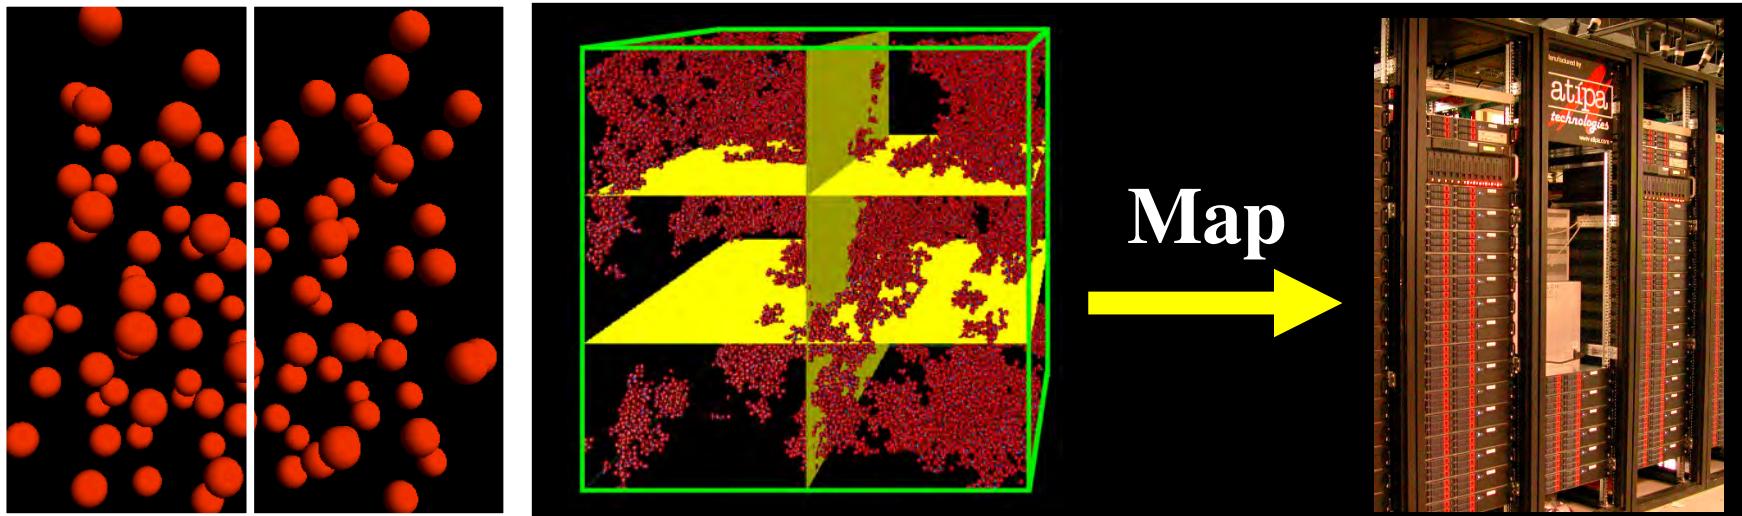

Parallel Computing Hardware

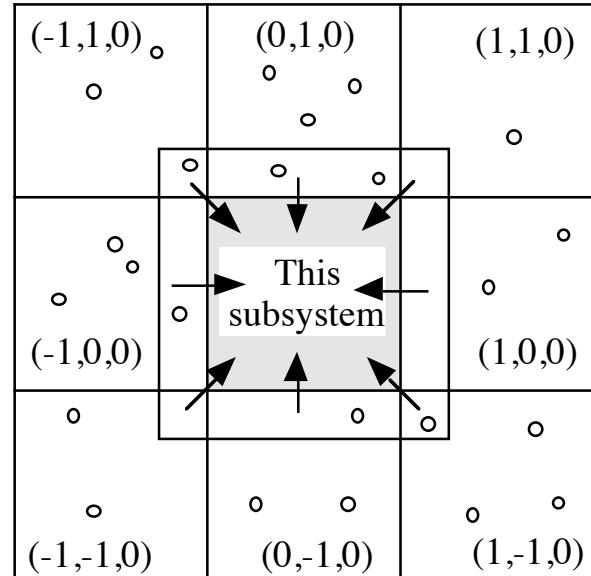

- **Processor:** Executes arithmetic & logic operations
- **Memory:** Stores program & data (**stored program computer**)
- **Communication interface:** Performs signal conversion & synchronization between communication link & a computer
- **Communication link:** A wire capable of carrying a sequence of bits as electrical (or optical) signals

Parallel Molecular Dynamics

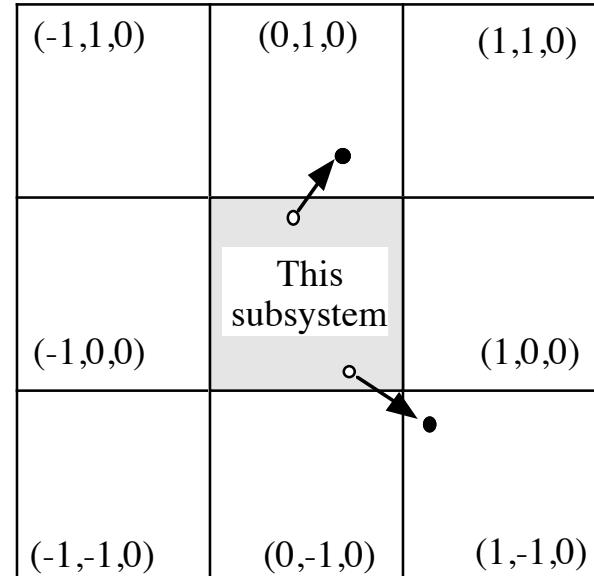

Spatial decomposition (short ranged): $O(N/P)$ computation

Atom caching: $O((N/P)^{2/3})$

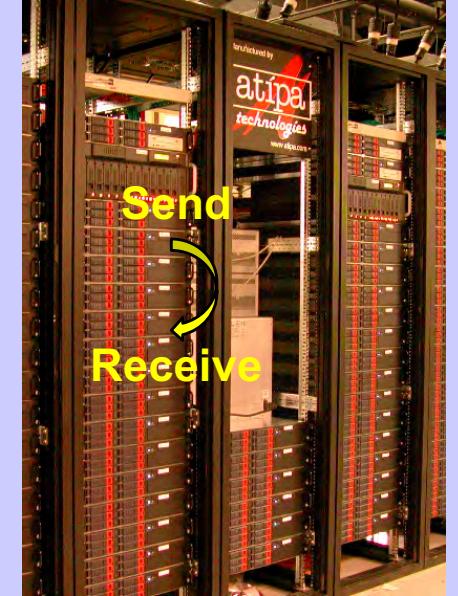

Atom migration

MPI Programming

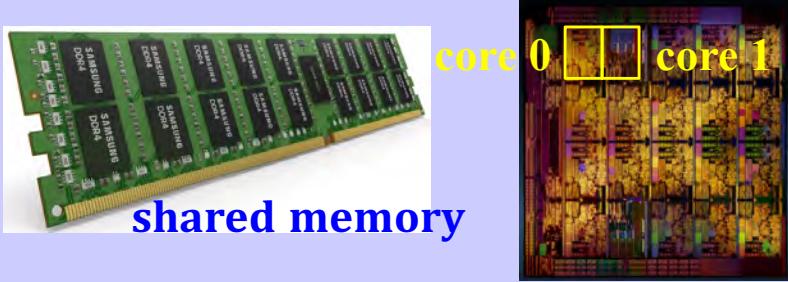

```
#include "mpi.h"
#include <stdio.h>
main(int argc, char *argv[ ]) {
    MPI_Status status;
    int myid;
    int n;
    MPI_Init(&argc, &argv);
    MPI_Comm_rank(MPI_COMM_WORLD, &myid);
    if (myid == 0) {
        n = 777;
        MPI_Send(&n, 1, MPI_INT, 1, 10, MPI_COMM_WORLD);
    }
    else {
        MPI_Recv(&n, 1, MPI_INT, 0, 10, MPI_COMM_WORLD, &status);
        printf("n = %d\n", n);
    }
    MPI_Finalize();
}
```

OpenMP Programming

```
#include <stdio.h>
#include <omp.h>
void main () {
    int nthreads,tid;
    nthreads = omp_get_num_threads();
    printf("Sequential section: # of threads = %d\n",nthreads);
    /* Fork multi-threads with own copies of variable */
    #pragma omp parallel private(tid)
    {
        /* Obtain & print thread id */
        tid = omp_get_thread_num();
        printf("Parallel section: Hello world from thread %d\n",tid);
        /* Only master thread does this */
        if (tid == 0) {
            nthreads = omp_get_num_threads();
            printf("Parallel section: # of threads = %d\n",nthreads);}
        } /* All created threads terminate */
    }
```

parallel section

The diagram shows a green RAM module labeled "shared memory". To its right is a microchip with two cores labeled "core 0" and "core 1". Core 0 is highlighted with a yellow box.

- Obtain the number of threads & my thread ID
- By default, all variables are shared unless selectively changing storage attributes using private clauses

GPU Programming: CUDA

- Compute Unified Device Architecture
- Integrated host (CPU) + device (GPU) application programming interface based on C language developed at NVIDIA

- CUDA homepage

http://www.nvidia.com/object/cuda_home_new.html

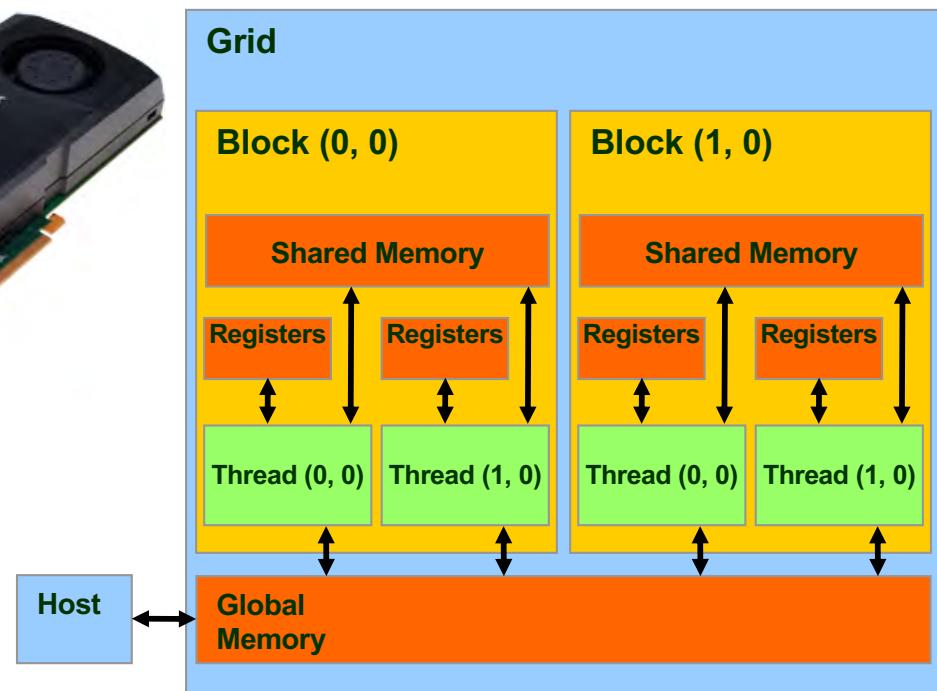

- Compilation

\$ nvcc pi.cu

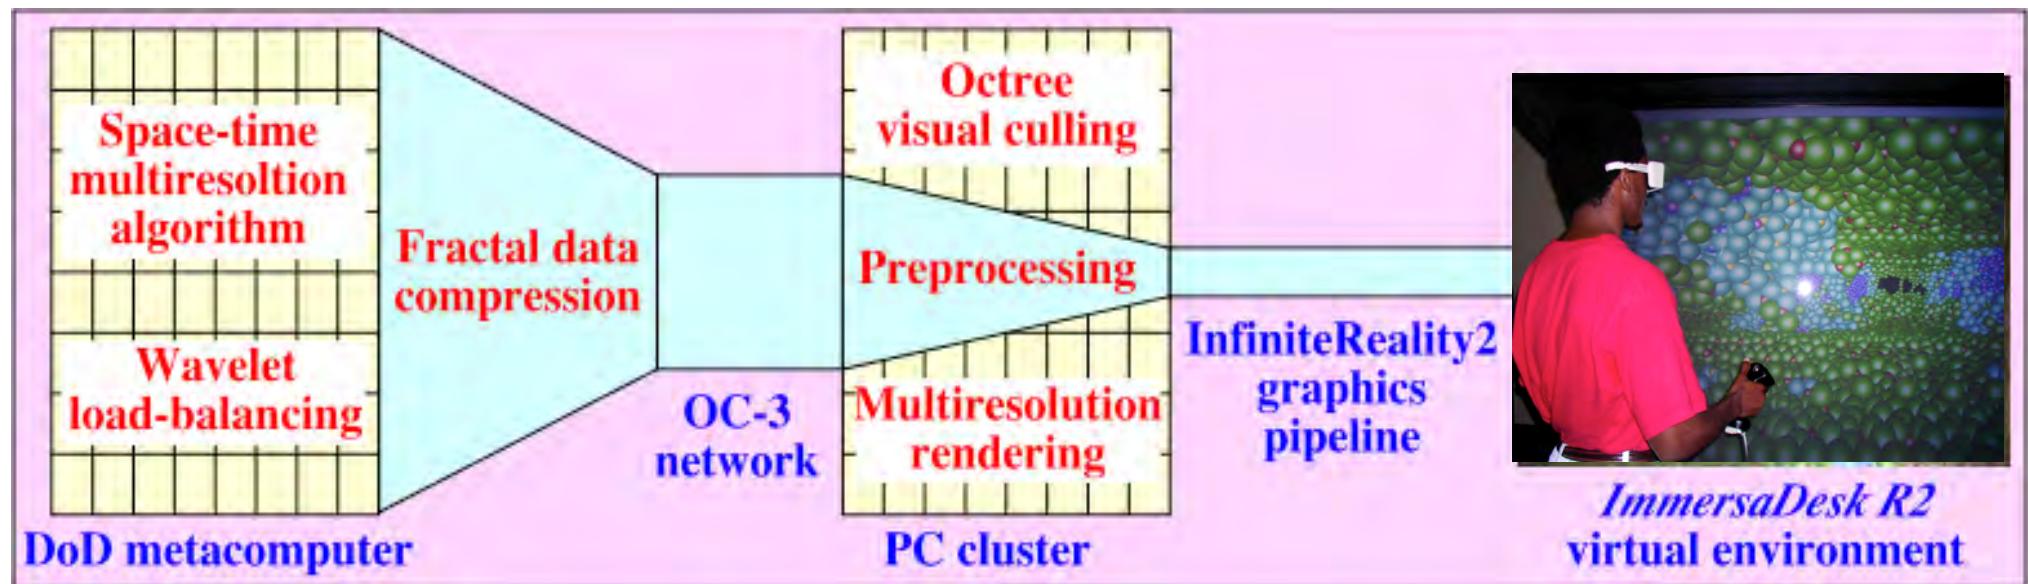

- Execution

\$ a.out

PI = 3.141593

Immersive & Interactive Visualization

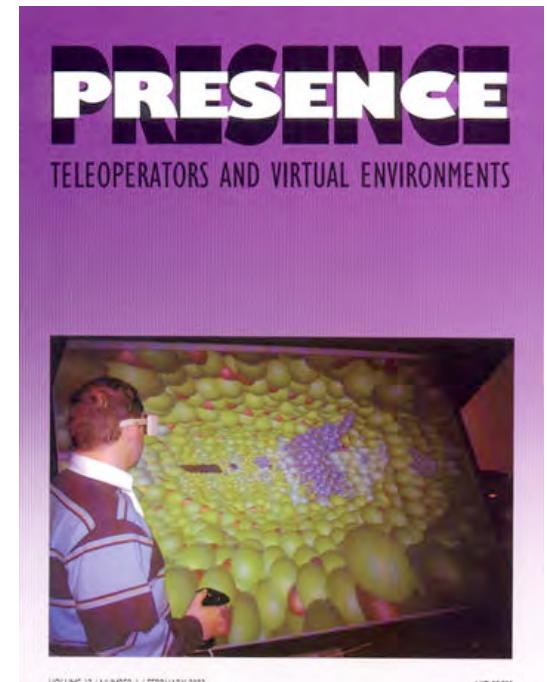

Basics:

- OpenGL programming/CAVE library

Billion-atom walkthrough:

- Octree-based view frustum culling
- Probabilistic occlusion culling
- Multiresolution rendering
- Parallel & distributed processing

OpenGL Programming

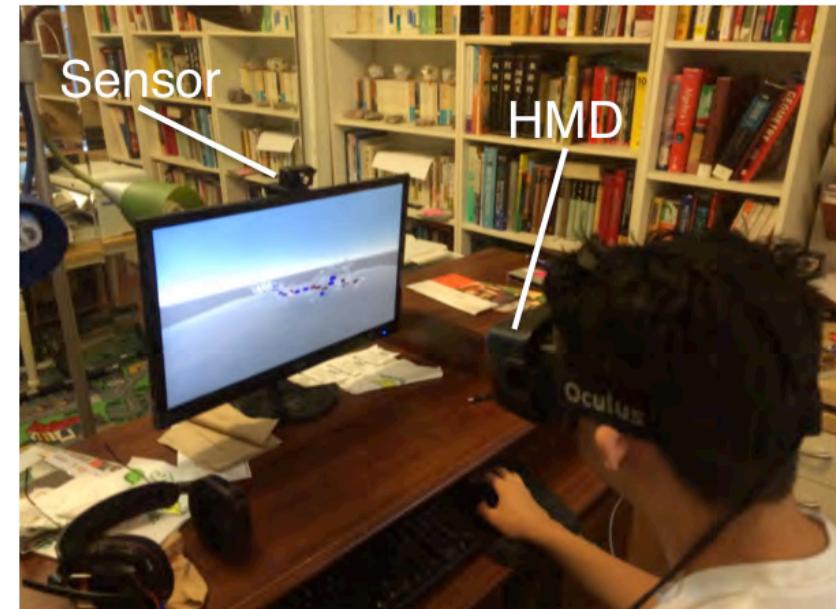

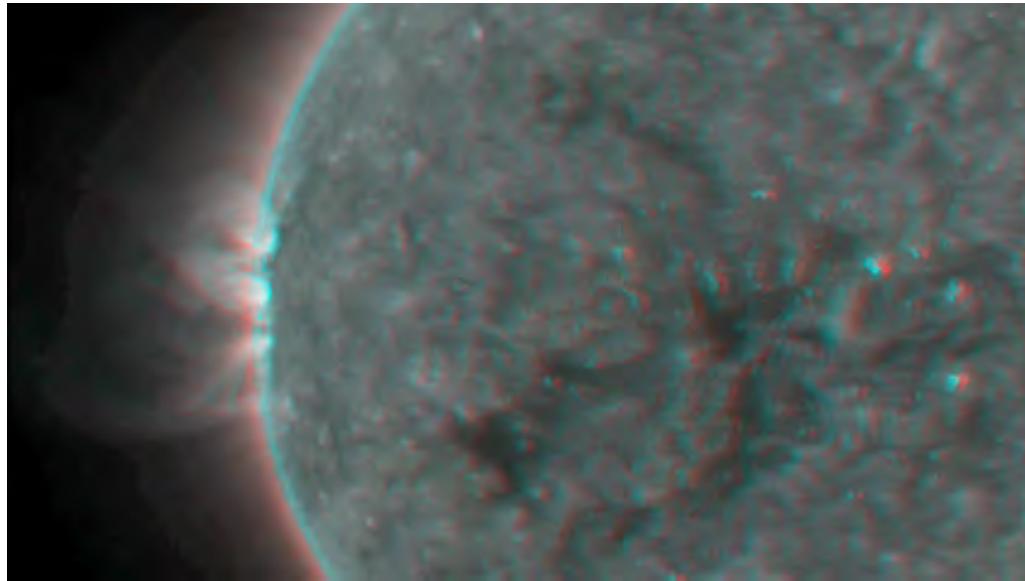

```
...
#include <OpenGL/gl.h>
#include <OpenGL/glu.h>
#include <GLUT/glut.h>
...
/* Set a glut callback function */
glutDisplayFunc(display);

/* generate an OpenGL display list for single sphere */
sphereid = glGenLists(1);
makeFastNiceSphere(sphereid,atom_radius);

/* generate an OpenGL display list for the atoms' geometry */
atomsid = glGenLists(1);
/* make the geometry of the current frame's atoms */
makeCurframeGeom();

/* Start main display loop */
glutMainLoop();
```

Grid Computing

- **World Wide Web:** Universal interface to digital library on the Internet
- **Information Grid:** Pervasive (from any place in the world at any time) access to everything (computing, mass storage, experimental equipments, distributed sensors, etc., on high-speed networks)

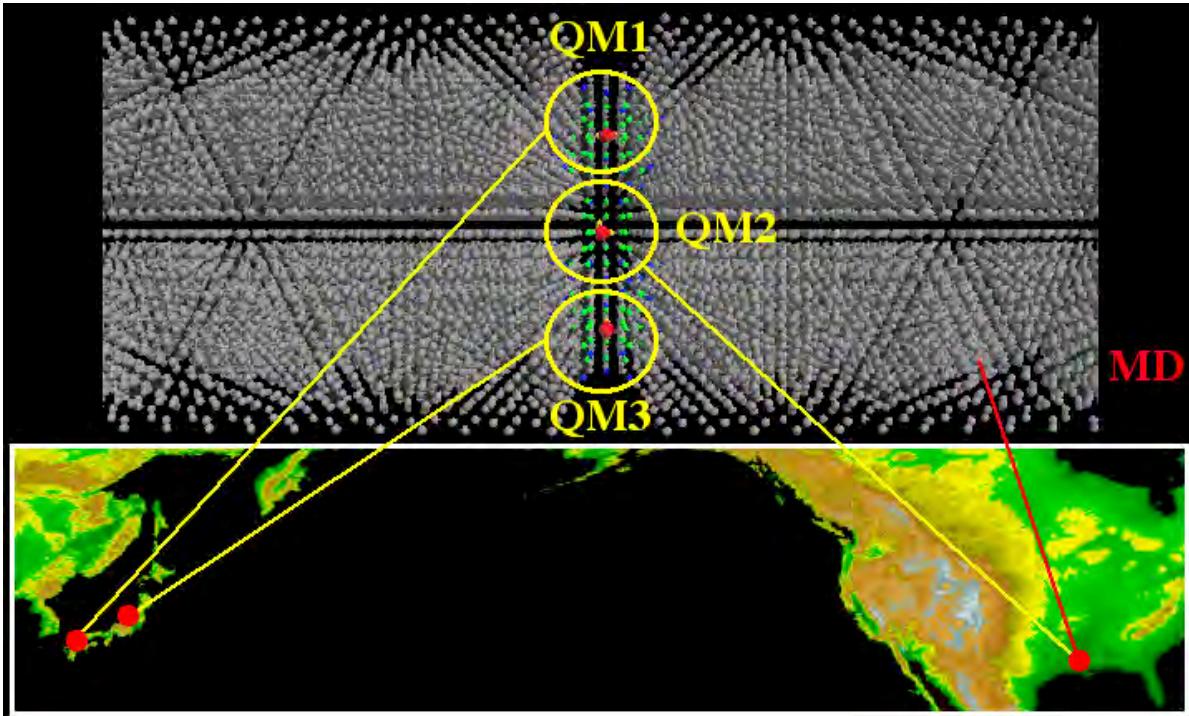

Grid Computing

- **Globus middleware**
 - > **Resource monitoring, discovery, & management**
 - > **Security**
 - > ...
- http://www.globus.org
- **Globus-enabled MPI**
http://www.globus.org/grid_software/computation/mpich-g2.php

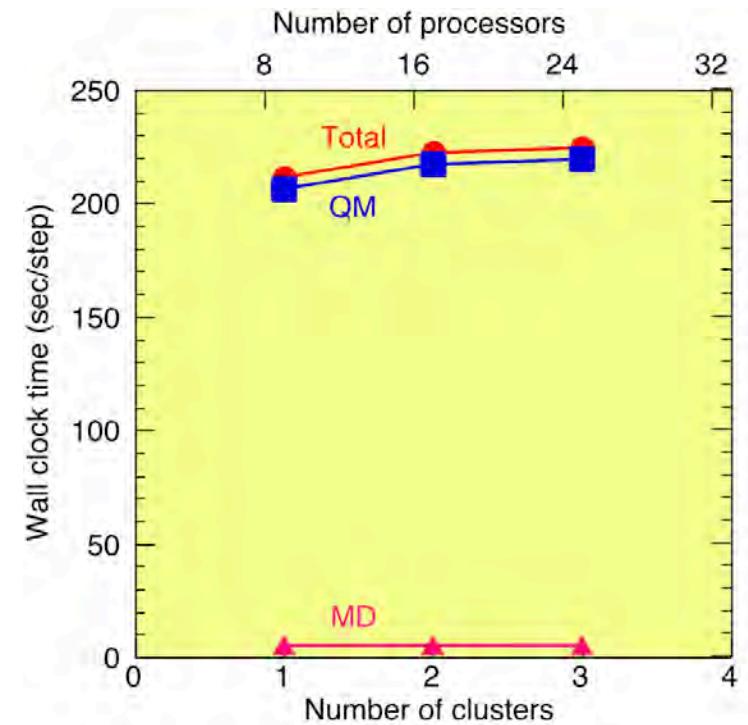

Global Collaborative Simulation

Multiscale MD/QM simulation on a Grid of distributed PC clusters in the US & Japan

- Task decomposition (MPI Communicator) + spatial decomposition
- MPICH-G2/Globus

Japan: Yamaguchi—65 P4 2.0GHz
Hiroshima, Okayama, Niigata—3×24 P4 1.8GHz
US: Louisiana—17 Athlon XP 1900+

MD — 91,256 atoms
QM (DFT) — $76n$ atoms on n clusters

- Scaled speedup, $P = 1$ (for MD) + $8n$ (for QM)
- Efficiency = 94.0% on 25 processors over 3 PC clusters

**QM/MM:
quantum-
mechanical/molecular-
mechanical modeling**

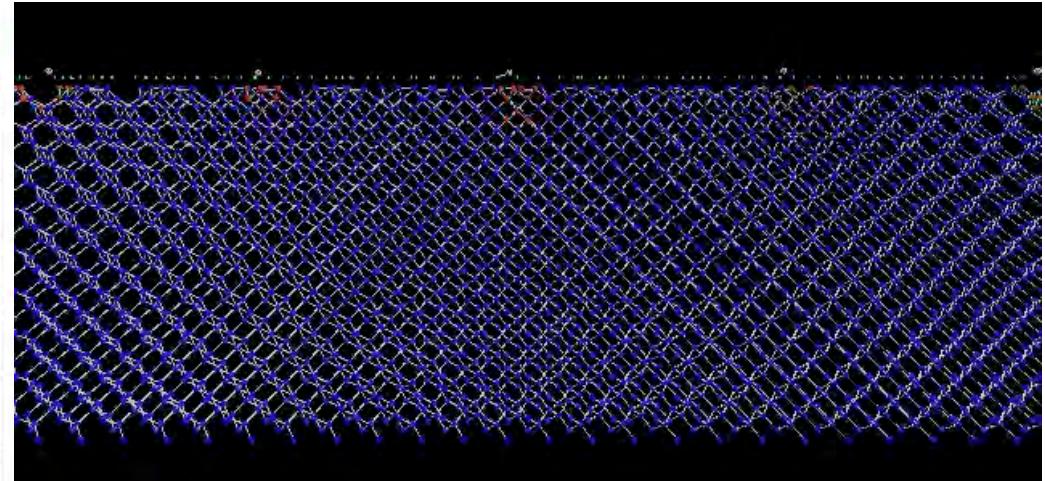

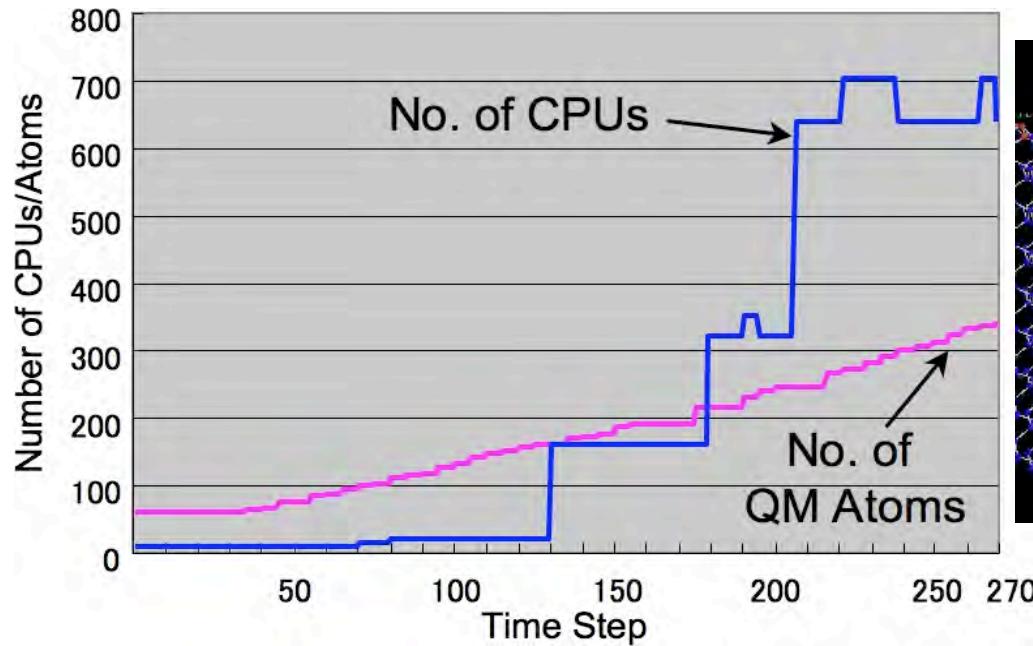

The Nobel Prize in Chemistry 2013 was awarded jointly to Martin Karplus, Michael Levitt and Arieh Warshel *"for the development of multiscale models for complex chemical systems"*.

- A. Warshel & M. Karplus, *J. Am. Chem. Soc.* **94**, 5612 ('72)
- A. Warshel & M. Levitt, *J. Mol. Biol.* **103**, 227 ('76)

Sustainable Grid Supercomputing

- Sustained ($>$ months) supercomputing ($> 10^3$ CPUs) on a Grid of geographically distributed supercomputers
- Hybrid Grid remote procedure call (GridRPC) + message passing (MPI) programming
- Dynamic allocation of computing resources on demand & automated migration due to reservation schedule & faults

MapReduce

- Parallel programming model for data-intensive applications on large clusters
 - > User implements **Map()** and **Reduce()**
- Parallel computing framework
 - > Libraries take care of everything else
 - Parallelization
 - Fault tolerance
 - Data distribution
 - Load balancing
- Developed at Google

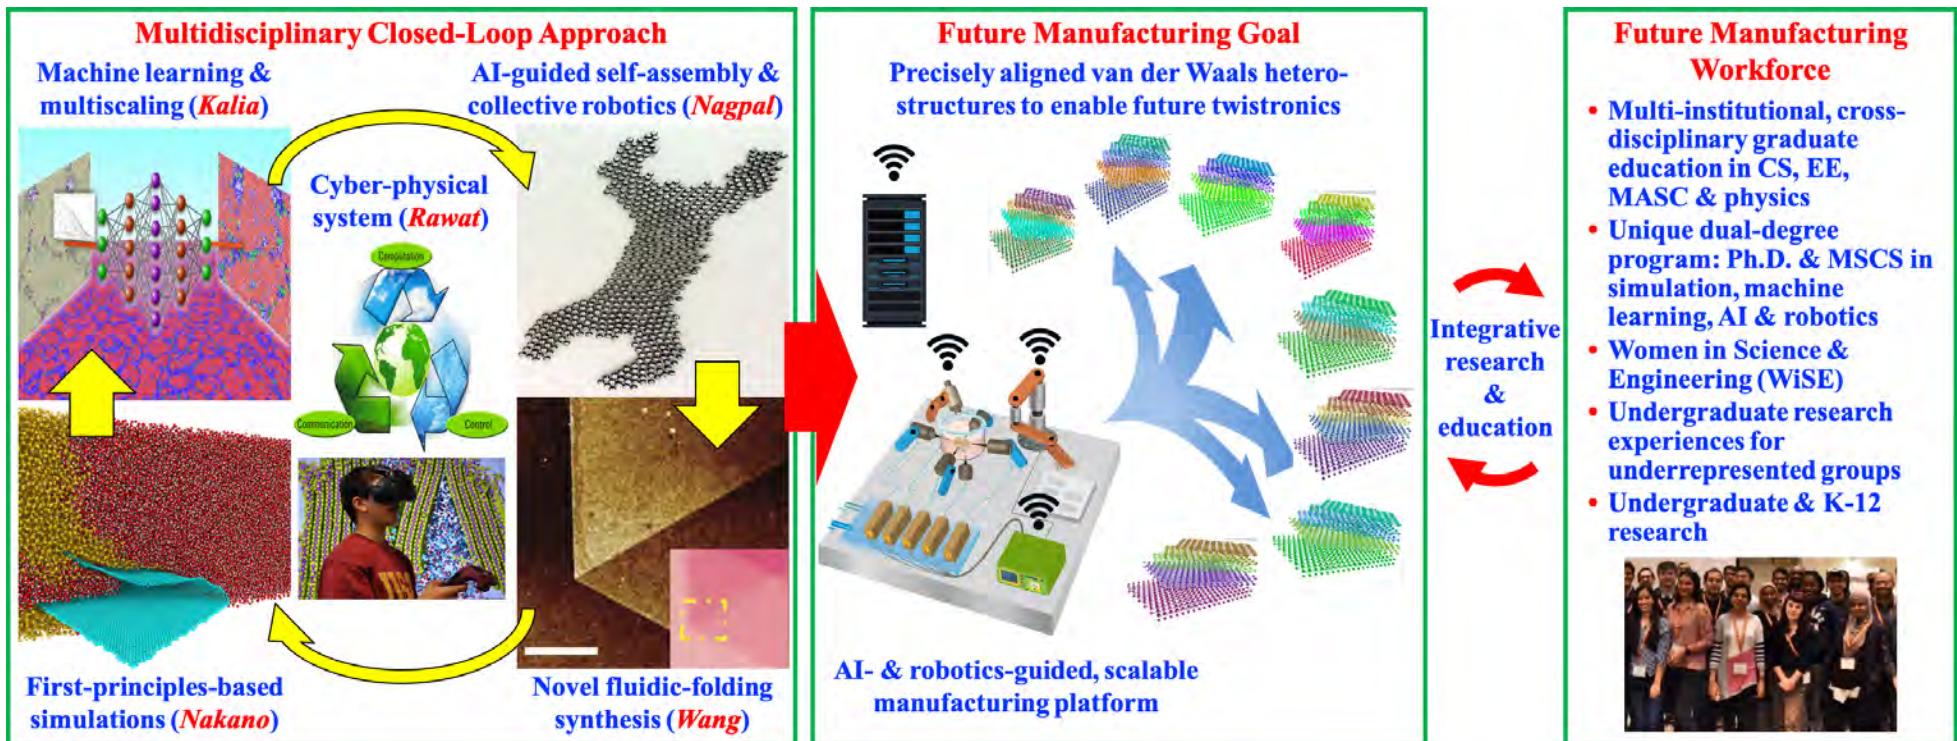

Cybermanufacturing

NSF 2036359 FMRG: Artificial Intelligence Driven Cybermanufacturing of Quantum Material Architectures

9/1/2020 – 8/31/2025

R. Nagpal (*Harvard*); R. Kalia, A. Nakano, H. Wang (*USC*); D. Rawat (*Howard*)

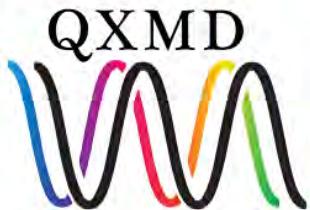

This project develops a transformative future manufacturing platform for **quantum** material architectures using a **cybermanufacturing** approach, which combines **artificial intelligence**, robotics, multiscale modeling, and predictive simulation for the automated & parallel assembly of multiple two-dimensional materials into complex three-dimensional structures.
